

Intermediate HPC

🕒 3 hours

🔧 Prerequisites (see below)

📍 At your campus

💰 No cost to members

Why do this course?

High-Performance Computing (HPC) allows you to accomplish your analysis faster by using many parallel CPUs and huge amounts of memory simultaneously. This short course provides a hands on introduction to running software on HPC infrastructure.

You'll learn how:

- HPC systems differ from traditional Unix environments
- to apply for ongoing access of an HPC machine
- the scheduler and batch systems work in HPC
- to submit a job and check its progress to completion
- to retrieve the results of your program

Prerequisites

This course assumes basic familiarity with the Bash command line environment found on GNU/Linux and other Unix-like environments. It also assumes knowledge of how to transfer files between computers using `ssh` and `sftp`.

If you lack these skills, consider taking "Unix for HPC" which blends "Intermediate HPC" with a primer on Unix and moving data around.

The Intersect approach to training

At Intersect, we work closely with our member universities to develop and deliver training that targets the day-to-day software and technology problems that researchers face. We deliver hands-on courses in a relaxed setting with knowledgeable, helpful trainers who are themselves researchers and who know how researchers work.

Questions always welcome.
